**Calgary SQL PASS**  
**7<sup>th</sup> October 2015**

# **Common SQL Server Mistakes and How to Avoid Them**

Tim Radney  
Tim@SQLskills.com

- **Team of world-renowned SQL Server experts:**
  - Paul S. Randal (@PaulRandal)
  - Glenn Berry (@GlennAlanBerry)
  - Jonathan Kehayias (@SQLPoolBoy)
  - Kimberly L. Tripp (@KimberlyLTripp)
  - Erin Stellato (@ErinStellato)
  - Tim Radney (@TRadney)
- **Instructor-led training: Immersion Events (US, UK, and Australia)**
- **Online training:** pluralsight <http://pluralsight.com/>
- **Consulting:** health checks, hardware, performance, upgrades
- **Remote DBA:** system monitoring and troubleshooting
- **Conferences:** PASS Summit, SQLintersection
- **Become a SQLskills Insider**
  - <https://www.sqlskills.com/Insider>

# 2015 Immersion Events

- **Classes in Chicago, Bellevue (WA), London, Dublin, Sydney (Australia)**
  - IE0: Immersion Event for Junior/Accidental DBA
  - IEPTO1/2: Immersion Events on Performance Tuning – Parts 1 and 2
  - IEHADR: Immersion Event on High Availability and Disaster Recovery
  - IEBI: Immersion Event on Business Intelligence
- **In-depth, instructor-led, technical training for SQL Server**
- **Here's our topic list for **IEPTO2: Immersion Event on Performance Tuning, Part 2****

SQL Server I/O	I/O Concepts for DBAs	SANs for DBAs
SQLOS Scheduling and CPU Performance Tuning	SQLOS Memory Management and Memory Performance Tuning	Data Collection and Baselineing
Wait and Latch Statistics	Query Plan Analysis	Extended Events
Performance Issue Patterns	Statement Execution, Stored Procedures, and the Plan Cache	
Deadlock Analysis	Advanced Extended Events	

- **For more information:** <https://www.sqlskills.com/training/>

# Author/Instructor: Tim Radney

- Consultant/Trainer/Speaker/Author
- Principal Consultant, [SQLskills.com](http://SQLskills.com)
  - Email: [Tim@SQLskills.com](mailto:Tim@SQLskills.com)
  - Blog: <https://www.SQLskills.com/blogs/Tim>
  - Blog: <http://www.timradney.com>
  - Twitter: @TRadney
- SQL Server MVP
- Chapter Leader "Columbus GA SQL Users Group"
- PASS Regional Mentor "South East USA"
- Outstanding PASS Volunteer
- Regular presenter at worldwide conferences on administration, disaster recovery and performance tuning.
- Friend of Red Gate
- (I also like electronics, aquaponics, farming chickens and tilapia)

- Email [paul@SQLskills.com](mailto:paul@SQLskills.com) with the subject line: **User Group Pluralsight code** to get a FREE (no catches, no credit card) 30-day trial of our 120+ hours of SQLskills content on Pluralsight
- For example:
  - <http://www.pluralsight.com/training/Courses/TableOfContents/sqlserver-waits>
    - 4.5 hours on waits, latches, spinlocks
  - <http://www.pluralsight.com/courses/sqlserver-optimizing-stored-procedure-performance>
    - 7 hours on stored procedure performance tuning
  - <http://www.pluralsight.com/courses/sql-server-2014-dmv-diagnostic-queries-part1>
    - Part one of a three part course on using DMVs for performance tuning

# Overview

- Backups
- Consistency checks
- Log cleanup
- Statistics
- Index maintenance
- Memory settings
- MAXDOP and cost threshold for parallelism
- tempdb
- SQL Server alerts
- Power savings

# Not Having Proper Backups

- **Do you have recent backups?**

- The backups need to be adequate
  - Plan your restore strategy to meet your service level agreements
  - Your RPO (recovery point objective) and RTO (recovery time objective) will determine your backup strategy
  - You will need the correct recovery model

- **Do you validate your backups?**

- The absolute best method to validate backups are good is by restoring them
- A dedicated environment, close to production specs will give you a good sense of how long a production restore may take
- Regulators, auditors, and examiners love to see restore validations

- **Script to check for frequency of backups**

- <http://www.timradney.com/backups>

# No Consistency Checks

- **Corruption happens**
  - I/O subsystem 99.98%
  - Local hardware 0.01%
  - SQL Server bug 0.01%
- **Finding corruption**
  - DBCC CHECKDB
  - DBCC CHECKALLOC
  - DBCC CHECKCATALOG
  - DBCC CHECKFILEGROUP
- **Have a scheduled job to run DBCC CHECKDB**
  - When DBCC CHECKDB fails, take immediate action
  - Many times the fix is a restore operation, so take action before backups are deleted and data is lost

# Not Purging Logs

- **msdb stores all backup and restore history**

- History is not automatically purged
  - `sp_delete_backuphistory`
    - Clears backup and restore history older than date given

```
USE msdb;
```

```
GO
```

```
EXEC sp_delete_backuphistory '01/01/2015';
```

```
GO
```

- This will delete all backup and restore history prior to '01/01/2015'

- **SQL Server log maintenance**

- By default the log only rolls over at service restart
- `EXEC sp_cycle_errorlog` – starts a new error log, execute daily
- Increase default value from 6 to some other number up to 99
- Recommend keeping at least 30 days of logs for troubleshooting

# Having Out of Date Statistics

- **Are your statistics up to date?**
  - You need a process to manually update statistics
  - Ola Hallengren – excellent process for updating statistics
  - `sp_updatestats`
  - “Auto Update Statistics”
    - Updates after approximately 20% + 500 rows change
- **Impacts of statistics to the Query Optimizer**
  - The Query Optimizer uses statistics to build the execution plan
  - Out of date statistics can negatively impact the Query Optimizer from determining a “good enough” execution plan

# Not Having Index Maintenance

- **Fragmentation**

- Data modifications (Insert, Update, Deletes)

- **Impact of fragmentation on query performance**

- A whitepaper from Microsoft stated fragmentation can slow down systems from 13% to 460% based on the size of the environment and fragmentation level
  - <https://technet.microsoft.com/en-us/library/cc966523.aspx>

- **Controlling fragmentation**

- Rebuild, reorganize or disable-and-rebuild (in a transaction) the index
  - Schedule rebuilds or reorganizations in a maintenance plan
  - Use a custom script in a SQL Agent job such as Ola Hallengren's Index Optimize script
  - Use third-party tools

# Default Memory Settings In Use

- **Max and Min values for SQL Server 2008R2 and below**
  - Maximum default is 2147483647 MB or 2 PB
  - Minimum default is set to 0
  - Potential for SQL Server to starve the OS and OS to starve SQL Server
  - Max memory applies to the buffer pool only
- **SQL Server 2012 +**
  - Maximum default is 2147483647 MB or 2 PB
  - Minimum default is set to 0
  - Memory Manager redesign
  - Max memory applies to all memory manager allocations
  - Can consider letting SQL Server dynamically manage memory
- How much memory does SQL Server need? - <http://bit.ly/1bSVDAu>

# Default MAXDOP and Cost Threshold For Parallelism

- **MAXDOP = max degree of parallelism**
  - Default is set to zero
  - Default means 'unlimited' number of CPUs could be used to execute a parallel region of a query
  - Microsoft recommendation states if more than 8 CPUs start with 8 and modify from there
  - For 8 or fewer processors use 0 to N
  - <http://support.microsoft.com/kb/2806535>
- **Cost threshold for parallelism**
  - Query cost/subtree cost
  - Default value is 5
  - This should be adjusted up to 25 – 50 based on your environment - <http://bit.ly/1rTs9UX>

# Improperly Sized tempdb

- **Special characteristics for tempdb**

- Recreated at startup
- Only one tempdb database per instance
- Modeled after the model database
- Cannot be backed up

- **Considerations**

- With 8 cores or less, create equal-size data files per the number of cores
- With more than 8 cores, start with 8 equal size data files and increase by 4 files based on contention
- <http://support.microsoft.com/kb/2154845>
- Enable trace flag 1118 always
- Place data files on separate disk with fast I/O, if needed

# Not Using SQL Server Agent Alerts

- **Provides proactive monitoring**
  - Requires database mail
    - Configure a mail operator to send alerts to a distribution group
  - Agent alerts
    - Severity 19 – 25 errors which are fatal errors
    - Error 825 which is related to an I/O operation retry
    - Agents can be created using the GUI or a T-SQL script
  - Have this as part of your standard server build
  - Step by step process <http://bit.ly/16nABr6>

# Using Balanced Power Savings

- **Power savings has a negative impact for SQL Server**
  - Can under-clock your CPU
  - Not conducive to SQL Server CPU behavior
  - Set power setting to “High Performance” rather than “Balanced Power”
  - Disable power savings in BIOS
  - Free tool CPUz can show clock speed in use
    - [www.cpuid.com](http://www.cpuid.com)
  - Other power settings can be bad such as putting a NIC to sleep

# Summary

- **SQL Server is great, but a “next, next, next, finish” install is not good**
  - Have proper backups
  - Run regular consistency checks
  - Perform log cleanups
  - Update your statistics
  - Have proper index maintenance
  - Have proper memory settings
  - Configure MAXDOP and cost threshold for parallelism
  - Configure tempdb for your instance
  - Configure SQL Server Agent alerts
  - Turn off any power savings

# Thank you!
